

Katy Fire Station Renovation

Katy, Texas

The City of Katy selected the team of MRB Group and Drymalla Construction to perform design/build services for renovations to their fire station.

The project included construction of a third floor dormitory area over the equipment bays. The back parking and driveway area were removed and reconstructed with reinforced concrete pavement.

Construction of a new prefabricated metal building was completed in the rear of the existing fire station, and is used to store firefighting equipment. Included in this structure are three bays complete with electrical service, phone lines, water lines, sanitary sewer lines, etc.

The existing building was then remodeled into a wellness center including two (2) restrooms, locker rooms, heating and air. Also installed was an emergency generator and emergency transfer switch to power the Fire Station in case of emergency.

Client: Drymalla Construction Company

Location: Katy, Texas

Completion Date: 2010

Engineer: MRB Group
